

# HOUSEHOLDER ENERGY EFFICIENCY MANUAL

The Energy Efficiency Manual is for all households, whether you own or rent your home, there are easy to implement changes you can make to help you make your home more comfortable, and to save money and carbon.

Many of the changes are free to make and will save money. Others require investment in your home. You can make these changes one by one over time, or all together.

There is one manual for each of the house types typical to the west coast and we hope that you find them useful.

Home**

This Manual has been produced by the Big Green Tarbert project with funding from the Scottish Governments Climate Challenge fund. A key driver for this Manual has been the energy audits the project has been carrying out on homes in the Tarbert area. Through this process the project has identified a demand for information on simple easy to implement energy saving measures that people can carry out in homes that are found in this part of the West coast.
